

The “Horizon Joint Rejuvenation Centre” offers a more natural solution to people who suffer from joint and muscle pain.

Dr Raymond Comeau is pleased to announce the opening of the “Horizon Joint Rejuvenation Centre” located in Horizon Family Medicine in Sylvan Lake.

The concept of joint rejuvenation rather than surgery or cortisone injections is relatively new. “We take the person’s own blood (platelet rich plasma or PRP) or bone marrow stem cells; separate it from the red cells and inject it into the inflamed arthritic joint or tendon.

The treatment is used to help patients with chronic joint pain (pain that has gone on for more than 3 months) who have already tried other modalities such as physiotherapy, chiropractic, or acupuncture treatments.

“Many of our patients have severely damaged joints and are already booked for joint replacements. Regenerative treatments offer them a nonsurgical way to reduce their pain and delay or prevent the need for surgery”.

Typical areas treated include: knees, hips, shoulders, elbows, ankles, wrists, hands and feet.

Unlike cortisone injections, which over time degrade the joint and offers only short term improvement, stem cell and platelet rich plasma injections stimulate the joint to heal itself. Growth and repair factors as well as stem cells, present in your own body, are concentrated and reinjected into areas of inflammation to create a new healing response.

The procedure was pioneered in the field of sports medicine to help professional athletes like Peyton Manning rapidly heal their injuries and return to play.

This same technology is now available to anyone suffering from arthritic joints or painful tendons.

Although result may vary, most patients receiving stem cell therapy will see at least a 50% reduction in their pain. This allows the patient to remain active and improves their quality of life.

Chronic joint and tendon pain can rob the patient of energy and enjoyment of life. Many have difficulty sleeping or even performing simple daily tasks. “There is nothing more gratifying than to have a patient return to my office and tell me that their pain is gone or significantly reduced”.

Dr Comeau is accepting new patient at the Horizon Joint Rejuvenation Centre and encourages those who may be experiencing chronic arthritic or tendon pain to make an appointment for a stem cell assessment or platelet rich plasma injection. No referral is necessary.
